POLITICAL

Html for Political Leader/Candidate

Iwthemes - https://themeforest.net/user/iwthemes?ref=iwthemes

support@iwthemes.com

General Documentation and how-to guide for setting up and customizing this theme.

Thank you for purchasing one of our themes!

TABLE OF CONTENT

1.   Summary

Hello everyone, we thank for have purchased a copy of our theme. Be sure, you're get an excellent support and the entire service has been designed from the ground up to promote ease-of-use and for you be sure our products are 100% original. You should rest assured that if something doesn't go off good, our friendly support team is available to help you whatever you need.

This theme is **100% html5** with Css3 and some files of Javascript. Here, you don't find something about WordPress and neither an installation process. To edit this theme you need to have a bit knowledge about these technologies, all html files are documented in each section or portion of code. It's easy to use and update, anyway if you have doubts just write us to support@iwthemes.com and we're over there to help you and reply asap.

For editing we recommend to use Sublime Text, Brackets , Atom or an editor of your preference.

This theme does not have PSD files or graphic design proposal, just you'll see the code and customizing options.

2. General Details

Once you download the package of POLITICAL theme from themeforest.net, you will see next:

2 Folders (Html folder and Help Folder)

Into Html you will see next:

- 14 html files

- 5 Folders

  - **css:** all css files need to styles of site work correctly, into this folder you'll find more folders with representative name (menu, icons, hover effects..).

  - **js:** all Javascript files, there's a file called **theme-main.js,** it's very important because here there are all functions who make possible the correct functioning of site (tooltips, animations, scrolls) .

  - **img:** The images you see in gray color because we don't have the license of free use but we attach the links of them or you could write us to our support email.

  - **sass:** For developers who use Sass

3. ¿ How do I edit my new theme?

After you download the package of POLITICAL theme from themeforest.net and founded the folders we talked, you could open with you favorite editor (remember.. brackets, sublime..), look at which one the .html you want to edit and open it, you will find something like this:

Here, we're opening index.html file

```html
<body>
    <!-- Sidebar Mobile -->
    <nav class="col-md-2 sidebar px-0"> ... </nav>
    <!--Sidebar Mobile-->

    <!-- Header -->
    <header>

        <!-- /.loader -->
        <div class="loader"> ... </div>
        <!-- /.loader -->

        <!--Top Header-->
        <div class="top-header">
            <div class="container-fluid"> ... </div>
        </div>
        <!--Top Header-->

        <!--Hero-->
        <div class="home-hero">
            <div class="container">
                <div class="row">
                    <div class="col-4"> ... </div>
                    <div class="col-8">
                        <ul class="text-right m-0 menu">
                            <!--DropDown Menu-->
                            <li class="nav-item dropdown">
                                <a class="nav-link dropdown-toggle" href="index.html" data-toggle="dropdown" aria-hasp
                                <div class="dropdown-menu"> ... </div>
                            </li>
                            <!--DropDown Menu-->

                            <li><a href="about.html">About</a></li>

                            <!--DropDown Menu-->
                            <li class="nav-item dropdown"> ... </li>
                            <!--DropDown Menu-->

                            <!--DropDown Menu-->
                            <li class="nav-item dropdown"> ... </li>
                            <!--DropDown Menu-->

                            <!--DropDown Menu-->
                            <li class="nav-item dropdown"> ... </li>
                            <!--DropDown Menu-->

                            <li><a href="contact.html">Contact</a></li>
                        </ul>

                        <!--Button Menu-->
                        <div class="mobile"> ... </div>
                        <!--Button Menu-->
                    </div>
                </div>
                <div class="row">
                    <div class="col">
                        <div class="message-hero">

    </div>
</div>
<!--priorities List-->

<!--Divider-->
<div class="sep mt-8 mb-8">
    <div class="star">
        <i class="fas fa-star"></i>
    </div>
</div>
<!--Divider-->
```

Here, there's a general structure of one of .html, each section of .html files are documented

with **<!- - name of portion code - ->.** and closes in the same way.

3.1 ¿Where are the Javascripts called?

```
<!-- jQuery Local -->
<script src="js/jquery.js"></script>
<!-- popper.js-->
<script src="js/popper.min.js"></script>
<!-- bootstrap.min.js-->
<script src="js/bootstrap.min.js"></script>
<!-- newsticker.js-->
<script src="js/jquery.newsticker.js"></script>
<!-- Carousel-->
<script src="js/owl.carousel.js"></script>
<!-- Instagram-->
<script src="js/api-instagram.js"></script>
<!-- theme-main.js-->
<script src="js/theme-main.js"></script>
<!-- ======================= End JQuery libs ======================= -->
```

The Javascript files are few. You'll see the links before finish the body label in bottom

of .html.

¿What about main.js file?

```
$(document).ready(function($) {

    'use strict';

    $.simpleTicker($("#newsticker-roll"),{'effectType':'roll'});

    $('.owl-carousel').owlCarousel({
        stagePadding: 50,
        loop: true,
        margin: 5,
        nav: true,
        dots: true,
        autoplay: true,
        autoplayTimeout: 6300,
        autoplayHoverPause: true,
        responsive:{
            0:{
                items:1
            },
            480:{
                items:2
            },
            768:{
                items:3
            },
            1025:{
                items:5
            }
        }
    })

    $('.video-preview').click(function(){
        var video = '<iframe src="https://www.youtube.com/embed/e$
        $(this).replaceWith(video);
    });

    var feed = new Irstafeed({
        get: 'user',
        userId: '558761032',
        limit: 6,
        resolution: 'standard_resolution',
        template: '<civ class="insta-items"><a href="{{link}}" ta
        accessToken: '558761032.1677ed0.983b2acc9e964ed88a2d695540
    });

    feed.run();
```

Here the content of **main.js,** it's very important because here there are all functions who make possible the correct functioning of site (tooltips, animations, scrolls) . You can test it removing a portion of code and refreshing the browser. Anyway, if you have questions please write us to **support@iwthemes.com** .

Here, it's working:

- the news carousel on header

- the carousel of Priorities

- the video (on index.html), who plays in same page

- Instagram Api

- Loader on body (before charge full site)

- scrollTo Links

- back-to-top animation

- Menu on version Mobile

3.2 Css file

```
-webkit-appearance: none;
    border-bottom: 1px solid #e4e4e4;
    border-radius: 0;
    width: 100%;
    font-size: 13px;
    padding: 5px;
}
/* line 38, ../sass/main.scss */
input:active, input:focus,
textarea:active,
textarea:focus,
.form-control:active,
.form-control:focus {
    outline: none;
}

/* line 42, ../sass/main.scss */
textarea {
    height: 200px;
}

/* line 44, ../sass/main.scss */
.pinput_container {
    position: relative;
}
/* line 46, ../sass/main.scss */
.pinput_container::before {
    transition: 0.4s width;
    content: "";
    display: block;
    position: absolute;
    background-color: #a10114;
    width: 0;
    height: 1px;
    bottom: 0;
    margin-bottom: 0;
}
/* line 57, ../sass/main.scss */
```

Here there's an example how it looks the css code, it's located in **scss/styles.css,** almost all code of site is starting about 9954 line. If you have css knowledge it would be very easy to modify the general styles.

Note. This theme is working with SASS compilador.

3.2 Animations

POLITICAL theme is working with http://ianlunn.github.io/Hover/. In this link you can see

the hover effects available to use in your site.

How to use it?

Use prefix political-name_of_hover_effect:

You like this effect:

The correct use is:

political-sweep-to-left

and that's it :)

What about Animation when Scrolled the Site?

This animation works in javascript file **(theme-main.js):**

```javascript
$(document).ready(function($) {
    var $animation_elements = $('.animation-element');
    var $window = $(window);
    function check_if_in_view() {
        var window_height = $window.height();
        var window_top_position = $window.scrollTop();
        var window_bottom_position = (window_top_position + window_height);

        $.each($animation_elements, function() {
            var $element = $(this);
            var element_height = $element.outerHeight();
            var element_top_position = $element.offset().top;
            var element_bottom_position = (element_top_position + element_height);

            //check to see if this current container is within viewport
            if ((element_bottom_position >= window_top_position) &&
                (element_top_position <= window_bottom_position)) {
                    setTimeout(function(){
                        $element.addClass('in-view');
                    }, 500);
            } else {
                    $element.removeClass('in-view');
            }
        });
    }
    $window.on('scroll resize', check_if_in_view);
    $window.trigger('scroll');
});
```

When the visitor of your site is seeing the section you have the animation, automatically is going to charge a class called 'in-view' and in css styles gonna happen this:

```css
//*
.animation-element{
    opacity: 0;
    transition: all 0.2s;
    &.in-view{
        opacity: 1;
        transition: all 0.5s;
    }
}
```

And if the visitor is not seeing it, the section is not going to appear.

If you want to eliminate the animation just remove the class in the section you don't want

and save changes.

4. ¿Where are the images?

The images of POLITICAL are in gray background. So, here we attached the url of them for

using in you personal project:

From www.flickr.com

5. Knowing more about each page of theme

In this point, we want to talk about some elements we use on POLITICAL.

✴ INSTAGRAM API

To edit it, you need to open theme-main.js and search this:

```
var feed = new Instafeed({
    get: 'user',
    userId: '558761032',
    limit: 6,
    resolution: 'standard_resolution',
    template: '<div class="insta-items"><a href="{{link}}" target="_blank" id="{{id}}"><img src="{{image}}" /></a></div>',
    accessToken: '558761032.1677ed8.953b2acc9e964ed88a2d69554d03955f',
});

feed.run();
```

```
var feed = new Instafeed({
    get: 'user',
    userId: '558761032',
    limit: 6,
    resolution: 'standard_resolution',
    template: '<div class="insta-items"><a href="{{link}}" target="_blank" id="{{id}}"><img src="{{image}}" /></a></div>',
    accessToken: '558761032.1677ed0.983b2acc9e964ed88a2d69554d03955f',
  });
  feed.run();
```

To change to your INSTAGRAM make follow these steps:

1- Login from your browser to:

www.instagram.com

2- Generate your TOKEN here

http://instagram.pixelunion.net/

The number it generates paste on the code, where says "accessToken:" (as you see in the example).

3- Find you Instagram ID

Go to https://codeofaninja.com/tools/find-instagram-user-id an write your account username. This tool will be generate the ID.

After this, replace that number in the code where says "userId".

When the changes are ready, go to your browser and refresh the site. The changes will be done. if you have problems just write us to support email. suppor@iwthemes.com

✴ FONTAWESOME

POLITICAL theme is using FONTAWESOME 5.0.10 in its icons.

We use **web fonts with CSS option**. And you can see the icons available here:

https://fontawesome.com/icons?d=gallery&m=free

How to use:

https://fontawesome.com/how-to-use/web-fonts-with-css

Here an example:

https://fontawesome.com/icons/accessible-icon?style=brands

Just copy

```
<i class="fab fa-accessible-icon"></i>
```
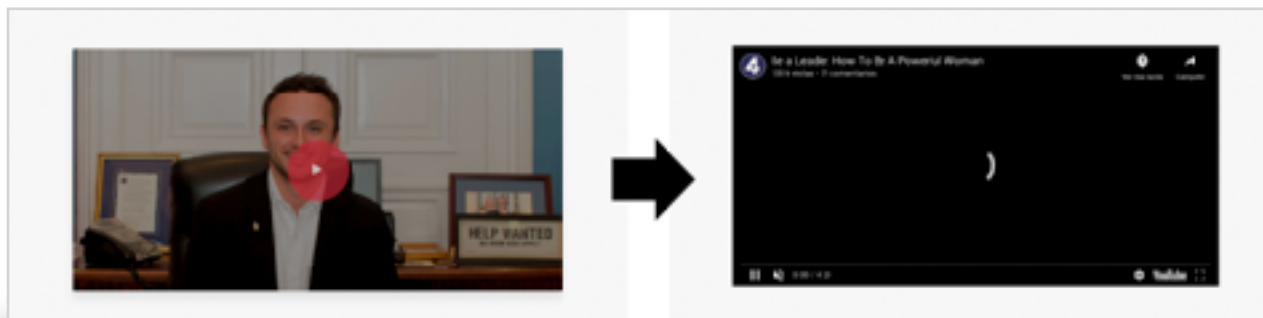

and paste in your code.

The changes will be done. if you have problems just write us to support email.

suppor@iwthemes.com

✳ **VIDEO PLAY**

In this section we're talking about this video: You will find in index.html

To edit it, you need to open theme-main.js and search this:

```
$('.video-preview').click(function(){
    var video = '<iframe src="https://www.youtube.com/embed/e9j4_tghBlc?rel=0&autoplay=1" class="video-iframe"></iframe>';
    $(this).replaceWith(video);
});
```

Replace this url https://www.youtube.com/embed/e9j4_tghBlc?rel=0&autoplay=1 by yours.

note: use the code embed.

And for changing the preview image go to:

".video-preview" class and replace your image here or from the images folder.

The changes will be done. if you have problems just write us to support email.
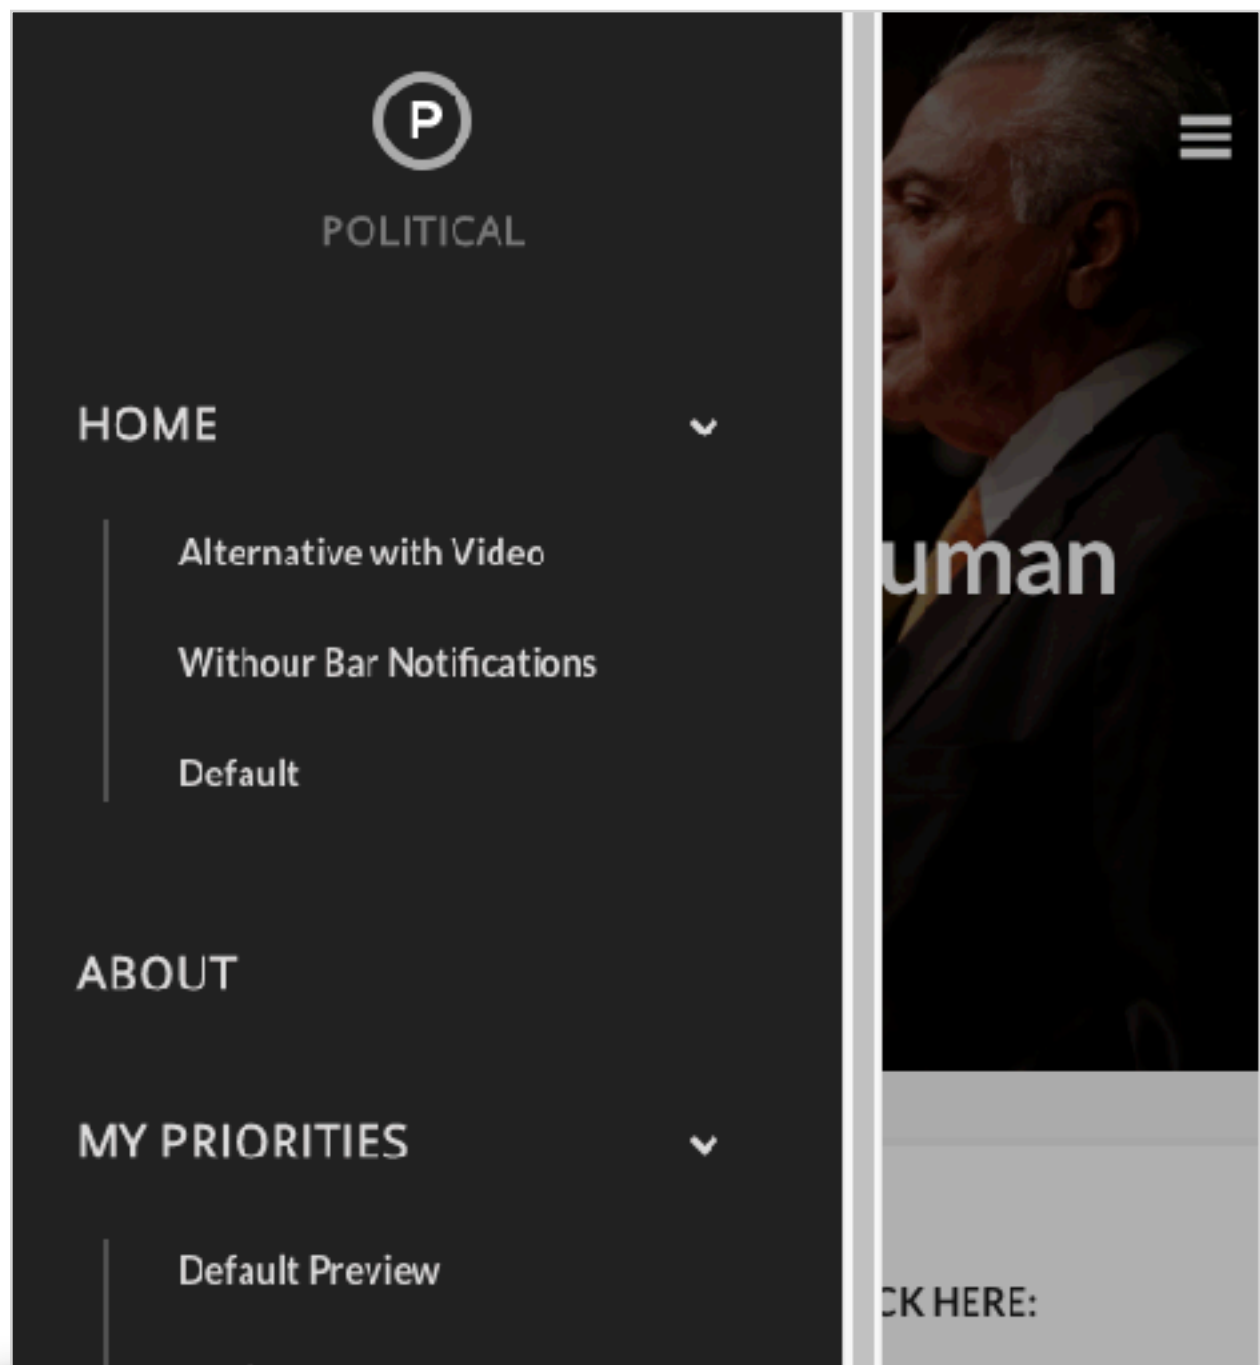

suppor@iwthemes.com

✳ CAROUSEL

POLITICAL theme uses 1 carousel (in priorities section). This theme uses 'owl-carousel' to make the carousels. Here the link of source https://owlcarousel2.github.io/OwlCarousel2/

To edit it, you need to open theme-main.js and search this:

```javascript
$('.owl-carousel').owlCarousel({
    stagePadding: 50,
    loop: true,
    margin: 5,
    nav: true,
    dots: true,
    autoplay: true,
    autoplayTimeout: 6000,
    autoplayHoverPause: true,
    responsive:{
        0:{
            items:1
        },
        400:{
            items:2
        },
        769:{
            items:3
        },
        1025:{
            items:5
        }
    }
})
```

We think it's not necessary to edit it. Just replace by your own content on html files.

6. Responsive Issues

This theme is totally responsive, you could see it in your mobile and everything is gonna work good. But we want to clarify when you start to add new information, one part of your responsive will change (or maybe no). Anyway, if you're seeing bugs in responsive details we could help you only if these bugs are related with the proposal of design we offer. Of course, we help you in other issues but it's possible to make some charge.

To edit the menu go to your html and search about line 30:

```
<!--Sidebar Mobile—>
     code…
<!--Sidebar Mobile—>
```

Replace your content..

```html
<nav class="col-md-3 sidebar px-3">
    <div class="nav-slider">
        <div class="sidebar-sticky">
            <div class="nav navbar-nav">

                <!--Logo-->
                <div class="logo-sticky text-center">
                    <img src="img/Logo.png" alt="logo">
                    <p>POLITICAL</p>
                </div>
                <!-- Logo -->

                <!-- Menu Sidebar -->
                <ul class="nav flex-column">
                    <li class="nav-item">
                        <a class="nav-link" href="index.html">
                            Home <span class="arrow-down"><i class="fas fa-angle-down"></i></span>
                        </a>
                        <ul class="sub-menu">
                            <li><a href="index-alternative.html">Alternative with Video</a></li>
                            <li><a href="index-without-bar.html">Without Bar Notifications</a></li>
                            <li><a href="index.html">Default</a></li>
                        </ul>
                    </li>
                    <li class="nav-item">
                        <a class="nav-link" href="about.html"> about </a>
                    </li>
                    <li class="nav-item">
                        <a class="nav-link" href="priorities.html">
                            My Priorities <span class="arrow-down"><i class="fas fa-angle-down"></i>
                        </a>
                        <ul class="sub-menu">
                            <li><a href="priorities.html">Default Preview</a></li>
                            <li><a href="single-priorities.html">Single Page</a></li>
                        </ul>
                    </li>
                    <li class="nav-item">
